DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions that are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, 10-12, drawn to carbonyl compound-trapping agents and compositions thereof.

Group II, claim(s) 7, drawn to a cartridge filled with a carbonyl compound-trapping agent.

Group III, claim(s) 8-9, drawn to methods for preparing a peritoneal dialysate having reduced carbonyl compound content by using a carbonyl compound-trapping agent.

The inventions listed as Groups I, II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking groups I, II and III appears to be that they all relate to a carbonyl compound-trapping agent.

However, TANAKA (U) teaches that metformin hydrochloride (MT), a biguanide compound, as well as aminoguanidine hydrochloride (AG), inhibit the formation of advanced glycation end products (AGEs), i.e. react with dicarbonyl metabolites. Therefore, by October of 1997, several compounds were known in the art as carbonyl compound-trapping agents.

Art Unit: 1623

Thus, the technical feature linking the inventions of Groups I, II and III does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

The special technical feature of Group I is considered to be compositions containing a carbonyl compound-trapping agent and a reducing sugar.

The special technical feature of Group II is considered to be a cartridge for trapping carbonyl compounds by using a carbonyl compound-trapping agent.

The special technical feature of Group III is considered to be methods for preparing a peritoneal dialysate having reduced carbonyl compound content by using a carbonyl compound-trapping agent.

Accordingly, Groups I, II and III are not so linked by the same or corresponding special technical feature as to form a single general inventive concept.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
